Finalizing & Testing the Application

The purpose of this testing was to verify that the online store application functions correctly and meets all project requirements prior to final submission. Testing was performed manually in a local development environment using XAMPP with PHP and MySQL, and the application was accessed through a web browser. Each major feature of the application, including the product catalog, shopping cart functionality, and order calculations, was tested to ensure accurate behavior, proper data handling, and a smooth user experience.

[GitHub](#)

Test ID	Description (What was tested)	Steps (How testing was performed)	Expected Result	Actual Result	Pass/Fail
CAT-01	Catalog loads and displays products and required fields	Open <code>index.php?page=catalog</code> and review the product list.	Catalog loads and shows at least 5 products with ID, name, description, cost, and quantity on hand.	Catalog loaded successfully and displayed all required fields for the product list.	Pass
CAT-02	Add to cart with qty = 1	On catalog page, select a product, left quantity at 1, click Add to Cart , then open cart page.	Selected items appear in cart with quantity 1 and correct	Item appeared in cart with correct quantity and pricing.	Pass

			cost/line total.		
CAT-03	Add to cart with qty > 1	On catalog page, enter a quantity greater than 1 for a product and click Add to Cart , then open the cart page.	Item appears in cart with the entered quantity and correct line total.	Quantity and line total matched expected values.	Pass
CAT-04	Adding the same product again increases quantity (no duplicate rows)	Added the same product to cart twice from catalog (e.g., qty 1 then qty 1 again).	The cart shows one row for the product with increased quantity.	The cart showed a single row and the quantity increased correctly.	Pass
CAT-05	Quantity cannot go below 1 on "add"	On catalog page, attempt to set quantity below 1 (or use the input controls). Submitted Add to Cart .	Quantity input enforces minimum of 1; cart does not accept 0 or negative add quantities.	Add quantity was enforced as 1 minimum (input constraints and server-side handling).	Pass
CART-06	Cart shows only items with quantity ≥ 1	Opened cart page after adding items; also ensured removed/zeroed items no longer display.	Only items with quantity ≥ 1 appear in the cart table.	Cart displayed only items currently in cart with quantity ≥ 1 .	Pass
CART-07	Update quantity changes line total correctly	In cart, change quantity using the Update form, and submit updates.	Line total updates to cost new quantity.	Line total updated correctly after quantity change.	Pass

CART-08	Update quantity to 0 removes item	In the cart, set an item quantity to 0 and click Update .	The item is removed from the cart display.	The item was removed successfully.	Pass
CART-09	Remove button removes item	Click Remove for an item in the cart.	The item is removed from the cart.	The item was removed successfully.	Pass
CART-10	Subtotal equals sum of line totals	Added multiple items; manually checked subtotal equals sum of displayed line totals.	Subtotal equals the sum of all line totals.	Subtotal matched the sum of line totals.	Pass
CART-11	Tax calculation uses 5% rate	Observed subtotal and tax; verified tax = subtotal $\times$ 0.05.	Tax equals 5% of subtotal.	Tax calculation matched 5% of subtotal.	Pass
CART-12	Shipping calculation uses 10% of pre-tax subtotal	Observed subtotal and shipping; verified shipping = subtotal $\times$ 0.10.	Shipping equals 10% of subtotal.	Shipping calculation matched 10% of the subtotal.	Pass
CART-13	Order total equals subtotal + tax + shipping	Compared displayed order total to subtotal + tax + shipping.	Order total equals subtotal + tax + shipping.	Order the total matched calculated value.	Pass
CART-14	Checkout clears cart and returns to catalog	Click Check Out from the cart page. Then reopened cart.	Cart clears and user returns to catalog; cart is empty afterward.	Redirect returned to catalog and cart was cleared successfully.	Pass
EDGE-15	Empty cart message displays correctly	Ensured the cart was empty (after checkout), then opened the cart page.	"Your cart is empty." message is shown and no item	Empty cart messages are displayed correctly.	Pass

			table appears.		
EDGE -16	Inputs reject negative quantities (client + server)	Attempted negative values in quantity fields (where possible) and submitted update/add actions.	Add enforces min=1; update enforces min=0; server-side prevents negative values.	Inputs were constrained and negative values were not accepted/processed.	Pass

Redesign:

The functional behavior is identical, so the core tests don't change (add/update/remove totals/checkout). However, the UI adds new testable elements:

Test ID	Area Tested	Test Description	Test Steps	Expected Result	Actual Result	Pass / Fail
UI-01	Catalog Styling	Verify catalog page loads with redesigned layout and theme	Open Catalog page	Dark theme, header, navigation pills, product cards visible	Layout and styling load correctly	Pass
UI-02	Cart Styling	Verify cart page uses same styling as catalog	Add item -> navigate to Cart	Cart layout matches catalog theme (colors, fonts, spacing)	Styling is consistent across pages	Pass
UI-03	Product Images (Catalog)	Verify product images load on catalog cards	Open Catalog page	Product images display when file exists; fallback text otherwise	Images load correctly or show fallback	Pass
UI-04	Product Images (Cart)	Verify product images display for items in cart	Add item -> view Cart	Same product image appears in cart row	Correct image shown per product	Pass
UI-05	Navigation Links	Verify navigation links function after UI update	Click Catalog / View Cart / Continue Shopping	Correct pages load using MVC routing	Navigation works as expected	Pass

UI-06	Quantity Controls UI	Verify quantity inputs and buttons are usable and styled	Update quantity in cart	Inputs and buttons remain readable and functional	UI remains clear and responsive	Pass
UI-07	Responsive Layout	Verify layout adapts to smaller screen widths	Resize browser window	Grid collapses and content remain readable	Layout responds correctly	Pass
UI-08	Visual Consistency	Verify consistent fonts, colors, and spacing	Navigate between pages	Consistent branding across application	Visual design remains uniform	Pass
